

Jira / Github Project Mngt

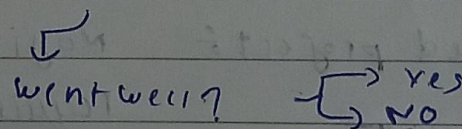

- Agile: sw dev. method, that is centered around helping teams get more stuff done by self organizing TH Task.

Agile board: A columnar view of Tasks

sprint: Pre defined time to complete a task.

sprint meet: discuss last sprint.

• what can be done better

• Discuss on work to be completed in next sprint.

in Scrum: try to complete All TODO, & ~~add~~ no new Todos added until all previous one are completed.

Kanban: can add new Todos.

• Same Agile board.

Issue Type

↳ story → it means ~~user~~ user story.

↳ As a — user

I want — feature

so that I can do —

↳ EPIC → too big user story for single sprint.

• Broken down in multiple stories

& each story is completed with one sprint.

Issues :- container for field, & field holds the data of the task to be done.

↳ Simply, the task we are suppose to do.

Projects :- containers of issues

↳ Team managed.

↳ Company " " .

Team managed project :- No jira admin permission is required.

• Entities ~~stages~~ ~~stages~~ within project. | fast & easy stages

company managed project :- Requires jira admin permission, as entities may be shared with other projects, i.e. it has Global entities.

• more complicated.
